Product Description

C26000 Brushed Pure Copper Sheet 1/8" (.125) X 12" X 12" Finish C11000 Sheet Of Brass Metal

How Copper Sheets Are Made

While a variety of metals, such as aluminum, brass, stainless steel, and titanium are used to make sheet metal, copper is the material of choice for specific applications. The metal's strong conductivity is used in these applications. For this reason, copper sheeting is widely used in the electrical appliance and building industries.

The thickness of this gauge of copper is 0.005 inches, and it is glossy and polished. This foil does not break easily by hand, but it may be cut easily with scissors. Copper sheets with a thickness of 5 mil are commonly used for embossing, die-cutting, other craft projects, and a variety of other uses. The heavy-duty copper tooling foil is 0.008 inches thick and can be utilized in a wide range of arts and crafts, home improvement, and construction projects. It can be cut with scissors and may keep its shape better than 5 Mil, but it will bend under pressure.
